MAKING KIN WITH THE MACHINE  
BY SUZANNE KITE, TASHIL BY LEWIS, ARCHER, PCHAWIS, UOTLAWI AKISTA

NRWTH is a collaboratively written essay that ~~explores~~ considers how indigenous epistemologies would understand archaic intelligence within their models of kinship. The authors consider AI holistically, from mined extraction to social impact and function.

LUCAS LAROCHELLE

HOW TO APPROACH AI?

And basically everything else... really.

Design Justice Network - Principles

Go to this page and check it out: [designjustice.org/read-the-principles](https://designjustice.org/read-the-principles)

These principles can guide the creation process of AI tools or services. I guess most of them would have to stop already at the first one:

"We use design to sustain, heal, and empower our communities, as well as to seek liberation from extractive and oppressive systems."

MACHINE LEARNING: HOW TO FIND CATS: [ ] = [ ] + [ ] + [ ]

Machine Learning (ML) helps recognizing patterns based on existing data and algorithms: an important branch of AI.

TECHNICAL PROGRESS has often promised to make the world a fairer place. But what exactly would we want to use AI for? What could an Utopian AI look like?

For over 200,000 years we've been hunting with spears; for less than ten years we've been looking for our next song with the help of AI. \*

by Katrin Werner (HILL)

\* from "We need to talk, AI. A Comic Essay on Artificial Intelligence"

Some room for your notes:

The Intersectional AI Toolkit argues that anyone should be able to understand what AI is and help shape what AI ought to be. It gathers ideas, ethics, and tactics to build more ethical, equitable tech—showing how already established queer, anti-racist, anti-ableist, feminist communities contribute necessary perspectives to reshaping the digital systems that affect us all.
