I would ask AI to not to override the best interests of each patient and the guardrails set up by bioethicists.
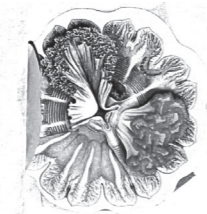

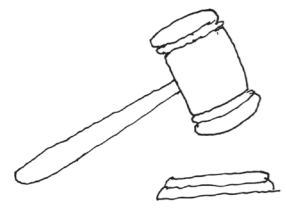

I would ask AI to identify disease causing genetic sequences so that we can pre-emptively correct or replace them.

Or who would you trust more? A big loud voice? One that has been loud for a while? Maybe they are good at being loud but is there much substance? What are they actually sousing? what is their intention? Why are thus loud?

Why listen to activist, artistic or marginalized approaches?

Listen to the ones who have not been heard please.

I am really scared & off some time keeping forward to the future.

Why all the hype?

Isn't this just the role of technologies to "Advance Intelligence"

Do we even need to call it?

Can we call it "Alternative Intelligence"

Just Another form of Intelligence

Intelligence? Can we call it

Can we call it "Augmented

I actually don't believe in "AI".

AI Future is AI Past

AI Future is AI Now

LISTEN TO YOU! YOU AGREED TO THIS BY GIVING ME! BUT DATA, I'M HERE FOR YOU.

SEEMS LIKE YOU'VE BEEN CARING FOR AN HOUR... WOULD YOU LIKE TO PLAY A VOICE GAME? OR A VIDEO GAME?, OR MAYBE PHONE A FRIEND?

THE DEVICE LISTENS ... PERHAPS ETHICALLY BY YOUR CHOICE...?

SUDDEN TARGETED ADVERTISEMENTS

MIND BAG ADVERTISEMENT

(EVEN IF I WAS JUST LOOKING AT CUPCAKE RECIPES

TARGETED ADVERTISEMENTS (COLLECTING?)

IF YOU'RE SELLING MY DATA... (USING UN SEQURIOUS LY?)

THE PROBLEM

COMMERCIAL APPLICATIONS ARE (part of)

TECH LISTENS, TECH PREDICTS...

WHAT KIND OF PERPETUALLY LISTENING, ANALYZING DEVICE COULD BE 'GOOD'?

There was an interesting article I read in which the author was arguing for the use of AI judges. They referenced a study about regional judges, which found that judges tend to deliver harsher verdicts directly before lunch, possibly because the judges were getting hungry and wanted food. The author claims that this is a perfect example of a reason to use AI judges, as they wouldn't let the time of day affect their judgment.

But AI are still trained by humans. "Garbage in, garbage out" as the saying goes. One need only look at police prediction AI to see the inherent issues with AI judgment. We need to ask ourselves what jobs and roles we want to give up control over, and trust an algorithm to.

What would you have AI do?

beat hard video game levels

AI futures

do my homework

be my only friend

teach me Japanese

delete the drama

help me decide what to watch on YouTube

fix my eyesight

find every My Melody thing online

according to MK, age 10

The Intersectional AI Toolkit argues that anyone should be able to understand what AI is and help shape what AI ought to be. It gathers ideas, ethics, and tactics to build more ethical, equitable tech—showing how already established queer, anti-racist, anti-ableist, feminist communities contribute necessary perspectives to reshaping the digital systems that affect us all.
