

intersectional AI toolkit

Hi AI, we have
questions...

Should I be carefully?
↓
MORE

Games could help ^{interventions} ^{un/necessary} resources

I want to

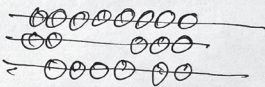

know about AI it is used where as what processes already use AI

The possibilities that lay in AI that could be used to help us find a way through the climate change

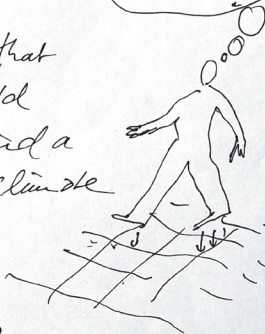

what kind of mechanical machines could "count" incidents and thereby "learn" or make visible

does AI always need electricity?

instead of imaging use tones or music instruments or an asian calculator

colour
the pavement could be sensitive

All AI should be open-source so

If AI is open-source, will there be enough incentive?
how ~~do~~ you control that?

Block chain?

Can AI development and training be blockchained
to create more transparency?

But the challenge is the analysis of the training data
as well as the outcome... how do you measure the outcome?

AI is a  relational instructions?

AI is matter!! Electron!!

~~WE~~

WHEN A MACHINE MAKES A
MISTAKE - HOW CAN I FIND
THE TRAINING DATA ON
WHICH THE FALSE (UNFAIR?)
LEARNING CAME FROM?

LEARNING
LIKE A MACHINE...

WHAT DOES THAT
MEAN?

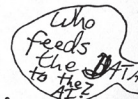

FACE PART
OF FACE

FACE
IN THE
DARK?

FACE OR PICTURE/IMAGE
OF A FACE?

INCLUDE THE
WORLD OF
THROUGH
VARIATION
IN THE PROCESS
THE BASIC FUNCTIONS OF AI

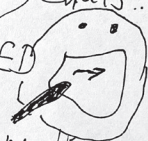

INTERNET
Does NOT SHOW
THE ~~WHOLE~~ WORLD
SO WHOLE
AI should

Learn not only
through the
Internet and
Chats....

blank
FACE
or
circle??
or ???

FEED
Information

so how we get
DATA? ... how we include
the excluded ... and
the underprivileged
and randomized ... etc.??

Who is allowed
to intervene?

To monitor
AI and
who has the
authority about
the output?

What does are
the consequences
of the output
has it
consequences...
for whom??

THE BASIC
FUNCTIONS OF AI:
WHO CREATES

I wish I knew what and how decisions are made on what kind of data is put into the algorithm, where these data get stored, what new data set are created in the ~~process~~ go on-going training of AI, then where they continue to get stored.

Some people mystify AI as though it has emotions, and treating it as though human.

AI is ultimately only the mirror of the creator or user

Before an AI is released into the real world, it should always go through "staging" with ~~two~~ ^{three} different scenarios in mind. One w/ intended purpose, one opposite of intended purpose, and one w/ random data.

The Intersectional AI Toolkit argues that anyone should be able to understand what AI is and help shape what AI ought to be. It gathers ideas, ethics, and tactics to build more ethical, equitable tech—showing how already established queer, anti-racist, anti-ableist, feminist communities contribute necessary perspectives to reshaping the digital systems that affect us all.

This issue was created 21 Jul 22 by workshop participants at ZK/U OpenHaus in Berlin. These publications are supported by the Akademie der Künste, Berlin in the context of AI Anarchies funded by the Commissioner for Culture and the Media (BKM). See more issues at...
