intersectional AI toolkit

Hi AI, we have questions…

The Intersectional AI Toolkit argues that anyone should be able to understand what AI is and help shape what AI ought to be. It gathers ideas, ethics, and tactics to build more ethical, equitable tech—showing how already established queer, anti-racist, anti-ableist, feminist communities contribute necessary perspectives to reshaping the digital systems that affect us all.
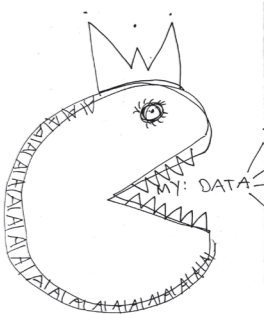

This issue was created 21 Jul 22 by workshop participants at ZK/U OpenHaus in Berlin. These publications are supported by the Akademie der Künste, Berlin in the context of AI Anarchies funded by the Commissioner for Culture and the Media (BKM). See more issues at…

WHEN A MACHINE MAKES A MISTAKE — HOW CAN I FIND THE TRAINING DATA ON WHICH THE FALSE (UNFAIR?) LEARNING CAME FROM?

AI should be opensource so IF AI is opensource, will there be enough incentive; how do you control that?

AI is a matter!! AI is relational interactions?.

Block chain?
Can AI development and training be blockchained to create more transparency?
But the challenge is the analysis of the training data as well as the outcome... how do you measure the outcome?

AI's Electron!!

Games could take resources to understand

I want to know about AI — it is used or where or what practices already are

AI the possibilities that can in AI that could be used to help us predict & change through the climate change

does AI always need electricity?

What kind of nuclear machines could "count" masters and freeberg "learn" or make visible

the parliament could be descriptive

Should I be careful? MORE

AI: DATA
— Faulty Friends
— Teaching
— Company Work

— Medical
— Mental
— Sport
— Food
— Issues
— Physically
— Place
— Money
— Activities

WHO CREATES THE BASIC FUNCTIONS OF AI?

What does the output authority about the consequences

Who is allowed to monitor AI and who has the authority about the output

Different DATA different consequences... for whom?

The world is different — how we include the excluded... and the underprivileged and random data.

FEED Free or Circle?? Chats

learn not only through the internet and information

WERNET DOES NOT SHOW THE WORLD IT SHOULD

Who feeds the DATA to the AI

FACE OR PICTURE/IMAGE OF A FACE?

FACE PART OF FACE IN THE DATA BUT NO FACE? DARK?

INCLUDE THE REAL WORLD THROUGH VARIATION MODULE FWDER IN THE PROCESS

LERNING LIKE A MACHINE... WHAT DOES THAT MEAN?

I wish I knew what and how decisions are made on what kind of data is put into the algorithm, where these data get stored, what new data set are created in the training

AI is ultimately only the mirror of the creator or user

Some people magnify AI as that it has enormous and training so it further

Before an AI is released into the real world, it should always go through "staging" with three different scenarios in mind, one w/ intended purpose, one w/ random data.
